Transcript Text

Yeah, I'm live now. Okay. You're welcome once again to the question and answer session of our very first lesson on editing and graphics in communication. And what I want to achieve with this is to ensure that we have an interactive session where everyone is able to learn. You understand that? So at this time I'm going to be reviewing and looking at set of questions from that has come in so far. Why this also give room for you guys to you know how do I call it now gives room for you to ask questions either in the live chat and the question pool and more particularly about the question pool. So do well to to you know do the the need for them. So you can say hello in the in the live chat if you are able to you know if you if you're connected on the stream already.

So the link has been shared right? Yeah the link is now in there. So I'll just share the link. Yeah let's do that. Okay, I'll pick it from the the very first set of questions and and then I'll take it up all the way down. So yeah, I'm just trying something new for for you guys. So all right, if you have a live question, I'm going to entertain that in a bit. But for now let's do what we can do now. Okay. So before I sort of share or start answering question I have something important I need to share with you guys. So I talked about in the early days of photography. Hello guys I can see you guys. I can hear you guys and sorry I can I can I can hear you on telegram but I can see your comments.

Hello. Live and clear. All right. I hope you have you enjoyed the lecture one, the L1, the initial session. I hope it has been helpful. I hope it makes sense to you. If you have any questions, if you if you don't want to put it in the in in the open chat, you can put it in the QR code. You can even paste it on either of the both of them. It will just help others learn too. Okay. So now I mentioned something about history that way long before typing way long before typing when we want to write letter L if you have been to places where they make project where they print on project cover where they bind books what they do is that there is a metal you understand the a metal that is carved out with the inscription letter L that letter L will then be put on a paint on a color and then when you place that letter L on the paper you have an impression.

Impression is a print out. If you get that say I understand it. If you get that say well understood. If you get that say well understood. I'm sharing a photograph with you now on my screen. Can you see there is a photograph on my screen? Good morning. Are we supposed to be on here or watching the YouTube live? If you have a a audio chat, a audio question, you are supposed to be here. If you want to type, you can be on YouTube. So, either way works. The most important thing is that everyone is included. Yes, please. Anywhere you prefer to be be. You understand? The most important thing is that everyone is included. I'm aware that there are some persons who are who are physically challenged? in fact, is Blossom on this chat at this moment? Blossom, I know I just picked the name Blossom. You emailed me.

I sent you some transcript of the previous video. If you're on this chat, I would like to hear your voice. So, like to hear your voice. Please ask me question. I know it may be difficult for you to type online. So, this is sort of my effort to make the class inclusive. Look at this guy on your screen. If you're on YouTube, you see him trying to arrange something, right? And he seems to be enjoying what he's doing. This thing is trying to arrange the metals. little metals carrying letters and then you put them together as as as words. So for example, you have series of L, series of A, series of O, series of V, series of E.

If you want to spell the letter love, you have to go to the to the to the box where you have I'm just going to quickly go there so you have a look at it. Usually we have something like this. So they they in batches. where is my highlighter? highlighter. Yeah, I don't know. Can you see my screen? Yeah. Oh, yeah. You can see the color. You see this? This is an example of a but it can be that just in this particular set there are only L here and again maybe in the next set. Okay, I'll use a lesser pen. Okay. And in this particular set there are O there and here there are V and here they are E.

So in order for you to spell the letter love. In order for you to spell the letter love then you have to come to L. Pick one L here. If it is the lower case pick lower case L. If it is upper case pick upper case L. If it is starting a sentence then you go to the box containing O. You go to the box containing L V, sorry. And then you go to the box containing E. Then you put them together. When you put them together, how do you do it? You arrange it like this. So that it is already spelled out. Does is this making sense to you? I see some people are saying that they're unable to sign in. If you're unable to sign in, it means you came into the class s came into the class very late. So all right.

So then you have to arrange each one of them after the order to ensure that they are well aligned and then what happens after then you should have something like this. You see if I want to duplicate a letter all I need to do is to make this impression on different papers. Is it is this clear? If it is clear say clear. If it is clear, say clear. I'm waiting to see if I'm making sense to you guys or not. If it is clear, say clear. Okay. Good. All right. Now, when you have something like this, you

have already make content. So what happen is that by time you impress it will start reading from where my red laser is all the way to the right meaning from right to left right to left but by time you make an impression becomes left to right.

So now I would like to show you what it looks like exactly on the board. Come here. This is it we have I make this full screen. screen. Let's go. Yeah, there you go. And then I don't need this. Okay, good. Look at this. You have a paper right here at the top. This is the paper. Paper holder. You understand? The paper is right under this. I can't see your screen. If you are on YouTube, if you on Telegram, you can only hear me. You can't see my screen. I'm not sharing screen on Telegram. Does that make sense? So, if you're on YouTube, there is an image I'm presently displaying that you can see and I can confirm that I can see the same. And that image that image is an image of what it looks like when you are trying to make an

impression. We have different parts. We have the bed. The bed is like the table where everything is sitting. Then the image. Okay, I'm going to come back there. I'm going to come back there. What is the image? I p that question to I'm going to respond to that. What is the image? So now we have the frame next to the bed. If you have a paper you can start sketching this the frame. The frame or you call it form form form. It sort of forms it brings the letters together hold it together. You understand? Then we have the block. The block is the tip where the impression is. You understand what I'm saying? The block is the imp is like the bottom of the impression.

Why this particular gray one that is darker gray is the letter making the impression. Next to it is the white aspect of it which is the paper. You see that the meta type. You see that this is metal type and then block. It carries the photos. It carries the drawing carries the text. It carries the what you want to impress. And then at this top is the pivot which you use to you hold to lift to push or to you know to roll over it to ensure that it is evenly distributed. And then we have the platin. So you can open it by lifting it up like this. And then this pivot is the is a grip that is like the hinges like your door hinges. So when I say image what is the image? The image is the result of the impression.

The image is the result of the impression. When they say imaging, I don't I'm not so sure you guys are experienced with printing. When you send something by computer to a printer, it sort of sends the digital image to the printer. the printer decode the the language the the one and zeros in form of image and then interpret it and send print it out on the paper. So what you have on the paper is the image that you send from the computer. That's what I mean by image. So the image here is what has been put together on this block. What you have here on this block which we can call the photo, the drawing, the text, whatsoever it is. Then it is impressed on the paper. The white and the pivot is holding the paper.

So it is flattened. Does this make sense? Say it makes sense. If it makes sense to you, I don't think it makes sense. Nobody's typing. I don't think this makes sense. No one is typing. Okay, you don't understand it. Okay, I need to explain it again. Look at this. Imagine my finger. Look at my finger. I have a fingerprint. When I place my fingerprint on a painting and then I place it on a paper, what happens to the paper? The color would not just be transferred on the paper, but it to carry the impression of my fingerprints. How many of you have done a thumb print before? a thumb print when you do a thumb print signature when it's if you have that is an impression.

Thank you for saying you have is an impression. Now imagine that I have a letter here. let's let's let's take a look at a video. I I don't want to do that because of copyright. I can't share a video with I'm probably going to share it with you as a link in in the room for you to see what it looks like. If I have my palm and I place it on the paint and then I took off my pal my pen my my palm and then I get a plain sheet of paper and I place my palm on the paper. What will happen here? and someone is to show the color based on the impression on my hand. The same way if you have set of letters like what I've shown you here you see this these are sets of letters these sets of letters are are now sort of there is a roller that they use to roll they roll it over the surface so it carries only the top only the letters sort of takes

in the paint and after they've taken in the paint They then turn it around and then place it on a paper. That is the impression. So take a moment, put it on Google. What is impression in print? What

is impression in print? You guys need more practical and I'm going to work on that for you. So So this is the bit of it that I wanted to show you. So for you to write any letter, you have to go through this series of boxes. Go through this series of boxes and then pick from it. Now explaining impression again. I placed my using my five fingers put it over a paint. Okay, let me use a bigger camera so you can see me. Can you hear me?

Yes, I can hear you. Okay. So, I said I place my finger on a paint and then lam it on a white plain sheet of paper. What will happen to that plain sheet of paper? What will happen to that plain sheet of paper? Now I believe you can hear me now. If I have a plain sheet of paper like this, I have my fingers put it on a plain on a plain paint on a paint whatsoever color it is and I slam that particular palm on this. What would I have? It will have my hand print. That's it. Hand prints. Now imagine that I have cuts of metals in form of letters like L, A, B, C, D, E, F, G, H, I, J, K, F up to letters. And then I put together L, O, V, E. Arrange them together in a particular order and I put the same metals on a paint and then I stamp it on here.

What will happen? It will show the letters on there. Thank you. My palm will create a handprint impression. The paper will show a letter impression. I'll see what I can use to describe that to you. Okay, I I think I have a good example to share with you guys now. Okay. look at this. Can you see my screen? If you can see my screen, the letters will show on the paper. Thank you, Peter. Miracle. That's it. That's it. That's it. Good. Now look at my screen. We have Who can spell out this word? If I have a paint and I place this particular metal on the paint and then I stamp it on a paper, what will I have? Who can spell this word out? Put it in the chat if you can spell it out.

You see the block? The block is the one beneath holding it. The letter block is the one on top. You see that? That's exactly what I I've explained to you. The letters will show on the paper. That was how they were printing in the olden times. That was precisely how they printed the LEDs. Tag. Okay. Tag L. Good. Good. Good. Yes. You get it. You get it. Good. You see why when you're looking at it on the plane, this thing is going to be opposite. That's why they call it negative. Negative. That is why it is called negative. By the time you place it on the print, it becomes positive. It will leave an impression on the paper. I hope this has been able to help you.

All right, since some of you have gotten it for those that didn't get it, if you are using small letter to spell tag taglat, you are wrong because the capital letter that we use, it means you would have picked the wrong type type face. So you need to be very careful about that. Okay. Now I'm going to stop sharing this particular screen. I'll go back to the QR code and then I'll be answering questions based on what has been asked in the chat. Okay. In the form. So this is a point where I I will put a close to the checkout. I need to put a close to the checkout. Or do you think I should say leave? Oh, reopening the attendance at the beginning.

No, I'm not going to open the attendance at the beginning. You have to pay for coming late. You have to pay for that. All right. So this is the QR code. and then I'm just going to come back to show my face. Okay. Good morning, sir. Good morning. How are you? Fine sir. And so the issue is some of us we went for camp like me. I just came like let me on my data because we were given a short break in the camp because today is a good Friday. So we go to camp from Friday till Sunday. So let me come ac no that shouldn't have Couple minutes. Okay. So, today is Good Friday is a

public holiday. If you continue to go by the public holiday, you just realize that you you don't have you know you haven't learned a lot because we've lost many many of the many most of our our times to public audience. All right, that's okay. So I'm going to reopen the attendance because of this adjustment reason. So that's okay. Why? I'm just going to take the questions and then I'll leave. I was I'll be suspending the mark 206 class because the same reason I didn't it didn't occur to me. Too many holidays and lost lessons. Okay. Boom. Let's go back there and I'll open up it after the question and answer session. So, let's keep all ourselves together and be here and for us to, you know, finish up this particular question and answer session. All right.

So on that note, I'm going back to the questions. So the first question I have here is is it is it being is being subjective a bad thing as an editor? Well, it's not a bad thing. There's an advantages of there are advantages of being subjective and it also has its own disadvantages. When you are subjective, you are following your thinking. You're making you're making your opinion. But

it's good to be objective. Subject just comes in naturally. To be objective is difficult as an editor because you come with your bias. You come with your own thoughts. You come your belief and more. So it's a really difficult to be objective but it's not a bad thing but is not a professional practice.

Our next question is if there is no time to edit can it still be published when a a well-written work a well written work is appreciated will always be appreciated. A badly written work will not be appreciated if there is no time for editing. Even if there's no time for editing you don't want something that will ruin your reputation. So, how can an editor balance shaping meaning while still maintaining objectivity and avoiding bias? How can an editor balance shaping meaning while still maintaining objectivity and avoiding bias? Well, you can do this by ensuring that you check with the writer to ensure what you are editing. Your role is to edit, not to change. Ensure you edit the original to of the of the author to carry it. That's the way you can do it. You have to be always double check. Go back to them. Go back to them. Issue auto query.

If you are not familiar with what they call author query, there is another course that is on my platform. If you go to courses tab, you'll find manuscript editing. If you're taking it already, you can have it. You can you already know what I'm talking about. How do we do page analysis? Page analysis. I think we're going to go back to this later and then we'll add into this. But page analysis, your ability to look through a page, analyze it and see what exactly is it communicating? What is what role is he achieving? Are will people be engaged with it? You understand? Are people going to engage with it? What would they see? How would it flow psychologically? How does it appeal to them? How does it appear to you? If you can hear me, can you confirm that you can hear me? We can hear you, sir.

Okay. Thank you. So now again I have another question that says, can a design make people believe something even it is technically true but misleading? Yes, design can be convincing and it can make someone believe something even when it is not true. There's what they call deep fake. AI is helping do that easily. So the lesson was clear and someone said this no questions. I'm happy to hear that. So in the historic evolution is contemporary era any different from the main era or the old era? Yes, it absolutely different. The way they print in the old generation in the early days is different from how they print in the present generation.

So no time is the same. There's evolution and things are changing. We're in digital age now. Impressions are not created the same way before. You can do what they call direct imaging, direct print where you print from your computer into into the machine straight. In the old you have to you have to use this plates that I've just shown you. Just to show again you have to use these things in the olden days but presently you don't need to do this there's what they call plates now it it doesn't involve you using manual arrangement of hands it is done digitally on the print it could make an impression on the plates and the plates there's a machine behind this guy it looks like something like this behind him So then the plate runs on over a sort of a cylinder and then it rolls over paper.

That's how newspapers are produced. So things are changing over the time and today people are even doing what we call direct printing where you just from computer from the design to print. Someone say can I use lesser time? Well, I I tried to make effort to use lesser time and technically this lecture supposed to be 3 hours per meeting, but I've just made it 1 hour. 3 unit cost means 3 hours. Two unit cost means 2 hours. So it's difficult to lessen the timer for you to get the same result in order to achieve the maximum result. That's why I'm using platforms using okay. And what is scope of editing? Scope of editing like I've shared earlier is like the the the boundary of your work.

Scope of editing is the boundary of your work. When we talk about scope of editing, we're talking about, you know, the contest. The contest. The contest. That's what we mean by scope. The contest. Are you editing for newspaper? Are you editing for TV? Are you editing for any other thing? That is what I mean. Again, what is the most important part of editing? The most important part of editing is the editing process itself. Doing the work, figuring out and picking out errors, and also suggesting the edit. suggesting the edit. So another person said can you expunate more on the history? I think you have to go back to the video except if you have a particular question. So go back to the video. The video will be available in the description of this particular one if there's

another person who is just coming to see this video for the first time.

Another question says that can an headline be both attractive and trustworthy at the same time? Yes, it can be creative, attractive and be trustworthy. Yes, it can be. It can be. yes. and let's see if you have any other any question. If you have any question online, please you can please unmute your mic to ask me another question here that I have says that in editing when it comes to headline, how does one know which headline suits a story? Okay, your headline should be able to attract readers first should be able to communicate or catch their attention within the shortest possible time and then short within between within two to 3 seconds actually and then it should give us an idea of what the content of the story. You shouldn't use deceptive headlines because you want to catch an audience. Another person says, I don't have Okay.

Can AI be be used as can AI be used as in editing? You can't use you shouldn't use AI to please the main editors itself. It's not a good practice in an aspect in the aspect of editing. How does one differentiate between images, illustrations, and diagrams? Okay, good. Images are Creative work of art drawn from imagination. From the name image is from the word imag. Imagine. Imagine. Imagination. Pictures are paintings. You understand? Pictures are paintings. Illustrations are drawing to explain to show why diagrams are you know you're putting some graphs together bringing them together. These are diagrams. These are diagrams. These are diagrams. Okay. All right.

someone said that I have no question for the question in the live class. My answer is yes. I have used AI for my reading last semester and it helped a lot. So, I crossed it to at least 70%. Okay. All right. It's good to know that. But I think I would like to have a chat with you. If you are happy to write me an email, then I'll send you a link to book a meeting. Okay. What year did the editing mil editing? What year did the editing military era ended? Well, it's well military and era ended in some 1999 when they handed over to Lucia Gas. I think that was in the last military intervention and that was the end of that era. Yeah.

So it ended in Nigeria for Nigeria contest here is happening elsewhere. Another question says how do you manage to break things down easy? What do you mean by that? How do you manage to break things out easy? I think I need clarity about that. And that question came from I think I need to understand what you mean. Yeah. What thing particularly? So can an author also be the editor of his work? Yes, it's possible but it's not professional is not advisable or is or even if he edits does it need to submit it to another professional editor? Yes, it's the standard if you are doing a professional process and it's not very good because often time you don't see the mistakes you have made for by yourself.

Okay. Someone said that all are types of editing needed for one project. can we use them any of them and get a good result? Well, all the kind of editing can be applied. It's just that one comes after the other. So it comes they come up for different reasons at different times and at different stages. So well newspaper how did newspaper help with the evolution of editing? Well newspaper was one of those early reasons why book publishing publishing printing press emerge. For instance, the first printing the printing price in Nigeria actually became very popular because newspaper started and there was need to to sort of circulate it far and wide.

Look at the name printing press. Why? What do they call the press? Press the miss the newsmen press. So is for the reason of mass communication that they needed a press and that press is the reason. So it's it has helped because there's need for mass production. So they needed to find a very good medium and how to you know quickly reach out to as much people as possible. How to edit? You want to know how to edit? Keep following this class. All right. a question says with the rise of AI tools in media production the role of editor is shifting from a manual corrector to an algorometric creator. If AI generates a new story, If an AI generates a new story that is grammatically okay, perfect but contains subtle implicide by or factual hallucination.

Where should the primary ethical and legal responsibility lie? With the develop with the developer will be the AI, the media house that deployed it or the human editor who reviewed the output. The responsibility will be on the human world video because that's the only person that is arrestable or the only person who is questionable person who is going to take the credit. So you have to take responsibility. What are the disadvantages of editing? I think editing have a lot of advantage. I

don't think I can think of any disadvantages. The disadvantage that it's time. Yeah. editing takes time and delays the process of getting published. So another question says, how can I effectively combine good editing skills with graphic design to create content that is both clear and visually appealing? You have to have patience.

Have an eye to to catch errors. That's the way to go about it. Have an eye to catch errors. And wow I think I have too many questions there. I'm on question 54 and I have 143. Wow. Okay. Okay. All right. So how can I effectively combine? So you need to be have a a you have to have patience to your ability. Don't just go for your pay attention to the details. know the content and read between the lines. When you do this, you'll be able to combine both editing techniques with a graphic technique. Okay. So, for if you have need for more historical explanation on evolution, please go back to the YouTube video. I think this is not an history class. It's just giving you some context. So how practical will this course be especially in terms of hands- on experience with graphic design and editing.

So it's going to be very practical. Watch out for it. It's going to be very practical and the practical session is going to be a live session. So you're on the lookout. So what is the key difference between traditional editing and modern editing? Traditional editing happens on paper. It happens in the early days. It happens the moment where you're laying the bricks the blocks and then along the line it happens on papers using edit editing signs and symbols and then in modern digital age it will use track changes you edit on computer you edit in Microsoft word in Google docs and more so all right how can I effectively combine editing I think I've answered this clearly right let's see is it safe for an editor to write an headline that is meant precise but it's it's about is it is not about safe it's a question of is it factual is it truthful safety is a

concern where there is no respect for democracy where there is no respect for democracy does that make sense that there should be freedom of expression freedom of speech so all Right? How can one really edit a large piece of writing without being overwhelmed? Y editing takes time. It takes patience. So you need to do it line by line, preset, presets, line upon lines. So you need to do it patiently. It takes time. Takes time. Yes, it can be overwhelming, but you need to do it gradually. An in-depth editing. An indepth meaning of editing. What's an in-depth meaning? What do you mean by that? If you want to ask question, please ask it clearly. Another questions here it says how can AI how can the use of AI how can the use of AI tools in editing while maintaining how can AI the use of AI in editing while still maintaining originality and ethical standards in in media production? I think you're trying to ask

how can AI be used even when you are concerned about accuracy or generality. AI such as Grammarly as widely deployed and paid for. We have qu which is within a defined boundary and useful and then as an editor know the limits know that you need to keep the voice. Know that you need to keep the voice. Can I have some questions on the live chat? I think already getting bored with these questions here. Okay. All right. Let me read this. I think this is going to be interesting. Since the role of media is to check the excesses of government and other bodies, why then does the power of information lie in the government or why is the editorial body being censored or highly monitored? Well, that's a military error because military regime it comes with restrictions because they have they have the chances and the they have the there's possibility for them to apply force. So that's it.

That's the the challenge there with the military era. So there are lot of restrictions that happens censorship because they don't want to be spoken ill or they don't want to hear things bad things about themsel. So these are some of the challenges that come and there are some democracies too like we have in the case of Yeah. Okay. All right. So someone said can we stick to Telegram classes? Well if I stick to Telegram classes it will only happen live. You won't be able to revisit it. That's the disadvantage. That's disadvantage. So now you're having telegram and you're having it even on another channel. I think that's an advantage.

Just choose where you want to be. And in the situation where either of them is not available, make adjustments. It's a learning curve. Okay? It's a learning curve. So do you have anybody who has questions on Telegram? You can raise your hand up. You raise your hand up. Let me know. Okay. Okay. How do someone go about auto query? Oh, go back. He needs to go back to my course on manuscript

editing. So that is going to help you. You see why I need I like recording. When you record, you are able to go back to it before exam. You can make some revisions. If you have accessibility issues, we can make transcript for you. From there, you can make revisions. So, it's just simple. It's just easy.

I believe learning should not be difficult. You can make things better. That's my belief. Anyway, all right. So, my question is that in what ways can editing be used to mislead or manipulate viewers? Okay. Look at it. Look at it. Look at it. I can decide. Look at the example I gave in in in the lecture. I can lie through a headline. I can in fact make this very class very difficult that teaching has become nearly impossible because internet is not available freely on campus because power is unstable or because I I don't have resources to even learn because I don't even have the enabling environment. That can be false. It can be misleading because right there there are times where there will be light.

There are times where there will be internet just unstable. That may be misleading and that it's it even sound manipulative. Anyway, every individual in this age and time should have what they call should have broken out of what they call internet poverty. So you understand that? I understand it's still on the increase anyway. All right. So, oh yeah, I think you guys are picking the words. Interesting. Internet poverty. Yes. All right. So, my question is, you mentioned something about the dimension of social media posting. Please, can you shed light on that, sir? About 1908 or 18. Okay. 1080. There's a dimension for YouTube.

You know, it's like a TV. It is wide and then the ice is short. So the short path the eyes okay look at my screen at a moment I'm just going to switch to show my camera you can see that my image itself I'll make that smaller just going to fit myself into one little box there and send it no matter how funny it looks. Okay. Just don't mind it. Good. All right. Okay. Let's do it this way. I'm going to take myself off entirely. Make it very small and put it in here. Have it. Okay. Look at that. You can still see me, right? If you're watching it on YouTube, you will be seeing what I'm explaining now. Now, look at the dimension of your screen entirely. It's when you put it on landscape just like your phone is.

In fact, I'll use my phone as an example. Let's switch this to the bigger screen. Look at this. This is a live class happening right here. This screen is on 1 920 by 1 080. This height, the height here, the height on the side is 1 8 0. The length from here to here is 1 920 1 920. So that is the dimension and that is the dimension for landscape. All right. I think there's something I can do to help. how many of you use Canva? Can you just raise your hand up if you use Canva? How many of you use Canva? Who uses Canva here? You use Canva? Can you put it in the comments? Put it in the comments if you use Canva. Okay. As more people, if you use Canva, please put it up.

I'm I'm trying to get up for you guys. Browser share. Boom. Okay, this is looking like it now. all right. So, custom size. I'm just going to explain to you about something. can you see my screen? Okay. Not yet. Just a minute. It helps. It helps. It helps. It helps. Okay, I see where the problem. All right. Good. Now, let's do this. I'm just going to explain that bit of it again. What did he say? okay. Boom. Let's come back here. A quick one. 181080. And this, if you want to do a portrait, a portrait, a portrait you have or Instagram story, Facebook story, the dimension should be 1080 width.

Edit onto my canvas. someone your mic is unmuted. You that is talking is editing something. Can you can you mute your mic please? Thank you. So and the should be 1920. So this will give you if you want to design something with for Instagram story. If when I click on Instagram story it comes here to give me a portrait like your phone. If you're doing it for posts you come here. This is a template. It says Hi, good afternoon. Can I recap again? Sorry. Okay. What I'm saying is that a question came and it says, "Can you mention something about the dimension for social media posting? Can you shed more light on what you mean by it's 1080 1 920? " So I'm trying to explain this using this particular example.

And if you can see my screen at the moment, I am putting together a clear description of what this would mean to anybody that is to know. So let's put it this way. graphics at the screen share. Just put my my head somewhere there. Put it somewhere there. Let's go. There you go. So, you can see me

at the top right right hand side. Okay. So, if you want to design for whatsoever platform, you need to know what platform you're designing for. When you know what platform you're designing for, then you can decide what formats to use. Let's say I want to design for a platform and I know the format. I will go to the custom size. If I'm design if I'm doing a video, it's usually in 1 1920 by 1820.

But then you will not know because it is not written here. So I'll go to custom again and then type it 1 920 width height 1080. You'll see it to show all the formats that you can do like that. They are all landscape. If I click on any of these, for example, presentation, video, desktop, wallpaper, you see that each of these are in landscape. Look at it. This is in landscape. Okay, this is in landscape. You see that? I'll close it. Another one here. Video is in landscape. This is another video in landscape. Now story is 1080 opposite of that 1 1920 it will change to Instagram story phone wallpaper Facebook story presentation or any other thing like that for as long as it is portrait.

For as long as it is portrait when you click on it, it's going to show you portrait view. It's going to show you portrait view. You see that? That is the dimension. Okay, let me rush down. That is that about that aspect of this. Let's come back to where we were. I hope this is making sense to you. Okay, good. Someone said they want more about editing. Maybe not now. Go back to the video. If you have any specific question, ask me. can someone who is not learned edit? No. Someone who is not learned cannot edit because they won't know what to edit. So why is editing not a sophisticated profession if it has a purpose? It is a very sophisticated in fact I have a platform where I I I sort of okay I graduated with my PhD without corrections.

That was a big story behind the platform and a lot of people were reaching out to know how I did it. from a UK prestigious university, University of Kent. It was an excellent one. There was no correction whatsoever. So that led to inspired me to start a platform build a business around it called Arescribe. A prescribe and I could just share with you this is a platform. what it does is that it's is empowering African academic publishing. So that's what it does. So the thing is proof reading is a big business. Yes. The first work I got before this job I got after even before finishing this website I also developed this website myself was is worth over 1.

8 8 million NRA just one work done within 3 weeks I think it's around 800 and something pound so yeah so as at that time the exchange rate was almost eating 2, 000 so it's it's nearly 2 million era read over pages I think about 300 pages of work so it's a professional work do it seriously and do it professionally okay so so it's a sophisticated profession and it should be taken seriously. So take this seriously. All right. I think most people don't have questions again except if there's anybody who is lively on telegram who have question. How are we to submit our assignments? The assignment I will give you instruction on that. Can analog graphics be relevant today? Well, it's it's relevant for historical references only, not actually for true application, but it still works, but it just is not very practical.

So, someone said okay, you need more clarification on historical evolution. This question is coming up more and more. I'll provide some things. So, what happens when you are being subjective? It means you are being biased. It doesn't help anyone. It always emphasize your own view. So said are are AI tools trustworthy tools for editing? Because AI makes mistakes sometimes too. Yeah. AI always makes mistakes. Not sometimes, always. Always always always. Yeah. You need to be very very very careful. So AI tools are not trustworthy. But you can use them you know depend on just like master servants. The master determines how to use the serant. If you use him well, you'll get the result. If you don't use him well, you have bad result.

So s said I don't get clearly about the image you you explain. Image is the impression is the result of what you have you have printed here. Okay. How do someone easily differentiate between different types of editing in in different types of editing? It depends on which is the most kind of error that you can see there. It should determine the kind of editing that you recommend. Nothing really. I think that's all. What are the forms of graphics? You have 2D. 3D. Yes. 2D is true dimension. 3D is three dimension. Could you please explain what you meant when you said course unit depends on Yes. You know when they say course unit if they say two unit course that course is meant to be taught for 2 hours.

When it is a three unit course it means it's carrying three units. So if they teaching you for two hours and each credit is carrying just two two points you know when whatever score you get is graded and organized into a group of 1 2 3 four or five points. So those five points will be multiplied by the number of units. If you have been taught for 3 hours per time is going to be multiplied by three. If you have been taught for 2 hours per time multiply by two. It's actually inappropriate for it to be two for one, two units or three units cuz this is three unit cost and you really can't achieve much if you're not. Is AI the best and perfect editing tool? No, AI is not the best is not the perfect editing.

Is subjective editing also known as developmental editing? no. It's different concept. Yeah, developmental editing is structural editing. Substantive editing is similar to it. It can involve development and editing. So it's stream very similar but it's not the same. How to edit with Microsoft Word. Yeah, you have to watch some videos on that. This is not a class to teach you that. Okay, that is all about the questions I've got on my Excel on live and 156 responses out of over 200 people. So at the moment now I'm going to open that particular form. Yes, I'm opening it now. So, a joy is going to be open until I'll just open it till let's do what's happening on Monday.

That should be Easter Monday, right? Friday, Easter Monday. Tuesday. Okay. Until Tuesday. It's It's going to be open to Tuesday. Do what you need to do. So, it's now scheduled open to Tuesday. All right. Ensure you check out. Ensure you check out guys on Telegram. Do you have any question for me on Telegram? Okay, no questions. So have a
